

Match the Animal to its Fact!

Because of a flexibly-hinged jaw, serrated inner mouth and strong tongue, this animal can hold around a dozen fish at a time

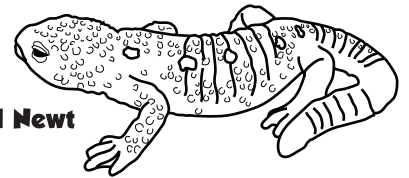

Lear's Macaw

When they are young they have spotted golden plumage and ivory bills until they molt into their bright red adult coloring

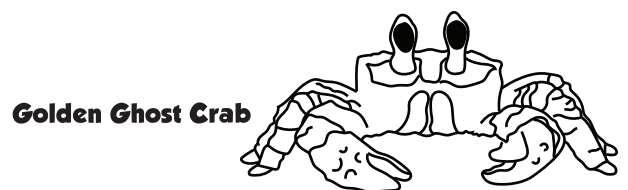

Atlantic Puffin

During the day they dig burrows up to a meter (about 3 feet) deep to stay hidden and keep from drying out

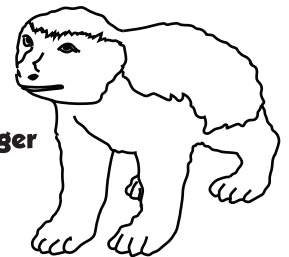

Red-Spotted Newt

There are only 2 known colonies of this animal

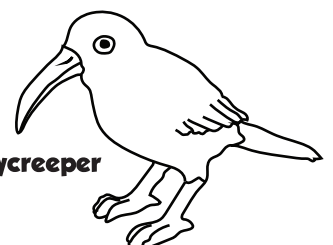

Golden Ghost Crab

This animal has very thick skin which helps with protection from bees and snakes

Honey Badger

As this animal matures, it goes through three phases of metamorphosis, changing habitat from living in water, to on land, to back in water

Scarlet Honeycreeper
